Good Energy Policy attracts economic development.
Georgia: Leading the Nuclear Renaissance in the USA
Nuclear renaissance?
• At Plant Hatch, currently there are approximately 5000 assemblies stored within the spent fuel pools and approximately 2800 assemblies stored in dry casks.

• At Plant Vogtle, currently there are approximately 2600 assemblies stored within the spent fuel pools. Vogtle currently has no fuel stored in dry casks.
• Georgia ratepayers pay 1 mil per kWh into a Congressional mandated “Nuclear Waste Fund” (Total over $800M now)

• The Federal Government has failed to pick up our spent fuel

• Utilities in GA are having to pass along the costs of storage, monitoring and security of waste to ratepayers.
